ABOUT

I am interested in IT and enjoy learning new technologies. I have experience creating responsive websites using HTML, CSS, JavaScript, React and Bootstrap through personal projects. I like building simple, user-friendly interfaces and improving my frontend skills. I also have knowledge of IT support based on the CompTIA A+ Core 1 and Core 2 topics, including computer hardware & software, Windows, networking, troubleshooting, and Help Desk basics. I have worked with network switches using PuTTY and understand basic switch configuration, VLANs, and network connectivity. I enjoy solving technical problems and learning how different systems work. In my free time, I build personal projects, practice new technologies, and continue improving my skills. My goal is to start a career in IT, gain real-world experience, and keep growing as a professional.

EXPERIENCE

Professional Games Trainer

Sep 2024 — Aug 2026
