Azerbaijani	Native

INTERESTS

Information Technology

Programming

AI & Machine Learning

Troubleshooting

ABOUT

I'm an IT support specialist with practical experience in troubleshooting, hardware and software installation, and Help Desk work. I know CompTIA A+ Core 1 and Core 2 topics well — computer hardware, Windows, networking basics, and network switch configuration. When something breaks, I try to figure out what's actually causing it instead of just patching the symptom, and I make sure to explain to the user what happened and how I fixed it. I usually start by narrowing down where the problem is coming from — hardware, software, or connection — before jumping to a fix, and I check that everything works properly afterward, not just that the error message is gone. I've handled support tickets, worked with both hardware and software problems, and configured computers from scratch — installing the OS, setting up drivers and software, and getting everything ready for use. I have a working understanding of Group Policy and domain environments — I can configure basic policies, work with access permissions, and troubleshoot issues related to connecting computers to a domain and their operation within a domain environment. I'm responsible and work well in a team. On top of my IT support background, I also build websites using HTML, CSS, JavaScript, React, and Bootstrap. I want to keep learning and build a real career in IT.

EXPERIENCE

Professional Games Trainer

Sep 2024 — Aug 2026

Caspian Entertainment Company

- Designed and implemented interactive educational games introducing various professional fields.
- Managed activity planning, timing, and participant engagement in structured group sessions.

IT Intern

Apr 2026 — Sep 2026

Azerbaijan State Advertising Agency (ADRA)

- Completed an internship in the IT Department, gaining practical experience in IT-related tasks.
- Gained hands-on experience in Hardware & Software Installation and configuration.
- Developed practical skills in System Troubleshooting, identifying and resolving common hardware and software issues.
